NIC Health and Safety Standards Blood Exposure Procedure

If a blood spill should occur, the following steps MUST be followed:

- When possible, injured party should go to sink and rinse injury with running water and "milk" the injury if possible to remove any bacteria that may have entered the wound.
- Supply injured party with antiseptic or single use packet of antibacterial ointment and the appropriate dressing to cover the injury.
- Bag all blood-soiled (contaminated) porous articles and dispose of in trash. Immediately wash and disinfect all non-porous items (do not continue service with these items).

This is the responsibility of the candidate and should be executed as follows:

Candidate/Student/Licensee Injury:

- PROTECTION If a cut is sustained, stop the service, put on gloves (if appropriate), and clean the injured area.
- 2. **APPLY** antiseptic to the injured area.
- DRESSING cover the injury with the appropriate adhesive dressing.
- COVER injured area with finger guard or glove if appropriate.
- 5. **BAG** and dispose of all contaminated single use items.
- 6. **REMOVE** gloves and wash hands.

Wet Disinfection Standard

- 1. All tools and implements. Prior to use on any client, all non-porous tools and implements or multi-use items must be cleaned AND disinfected. Items must be cleaned with soap and warm water or a chemical cleaner. The items must then be disinfected by complete immersion in an EPA registered, bactericidal, virucidal, fungicidal (Formulated for Hospitals) disinfectant that is mixed and used accordingly to the manufacturer's directions. When allowed by state rule, disinfectant sprays and wipes that are bactericidal, virucidal, and fungicidal, are acceptable forms of disinfection following the cleaning of the item. Note: Items that are porous are not able to be disinfected and must be disposed of after each use.
- Items MUST stay immersed or visibly moist with disinfectant for the entire contact time listed on the manufacturer's label to be effective.
